

# CHAPTER 12

## MORE ABOUT THE ORIGIN OF THE UNIVERSE AND T<sup>a</sup>'S.

## More about the origin of the universe and $T^a$ 's:

Discovery that the space-time relationship also includes or contains the  $T^a$  as a variable..

There are beings closer to ideality than others and have **timereal** and **timeimaginary** similars.

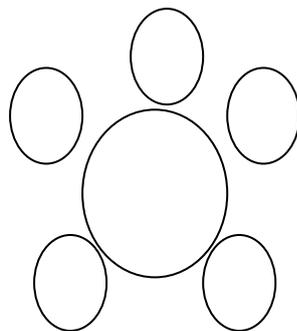

With the human qualities we can make a game and welcome our achievements while we go on overcoming ourselves.

Enthusiasm and motivation are key words, as well as learning to explain, then, is the initiator of the movement who has more to say.

From experience I know that is not good surpass all the difficulties rushly and restless. Rest are not bad. Moreover, the more you know, the less chance of falling ill.

"Gather up the night and day" and when it happens I feel falling down, and I must know myself and be aware and shelter me, relax me and put me on (if I listen my body it tells me that I'm nervous).

As in the case of the classification of proteins according to their conformation, there are several ways to **describe particles and their interaction (5 known)**.

Now let me show these 5 types:

- 1- First: interactions like an elastic collision
- 2- Second: does it establish connections between the collision and its consequent split up
- 3- Third: we include its sinusoidal nature.

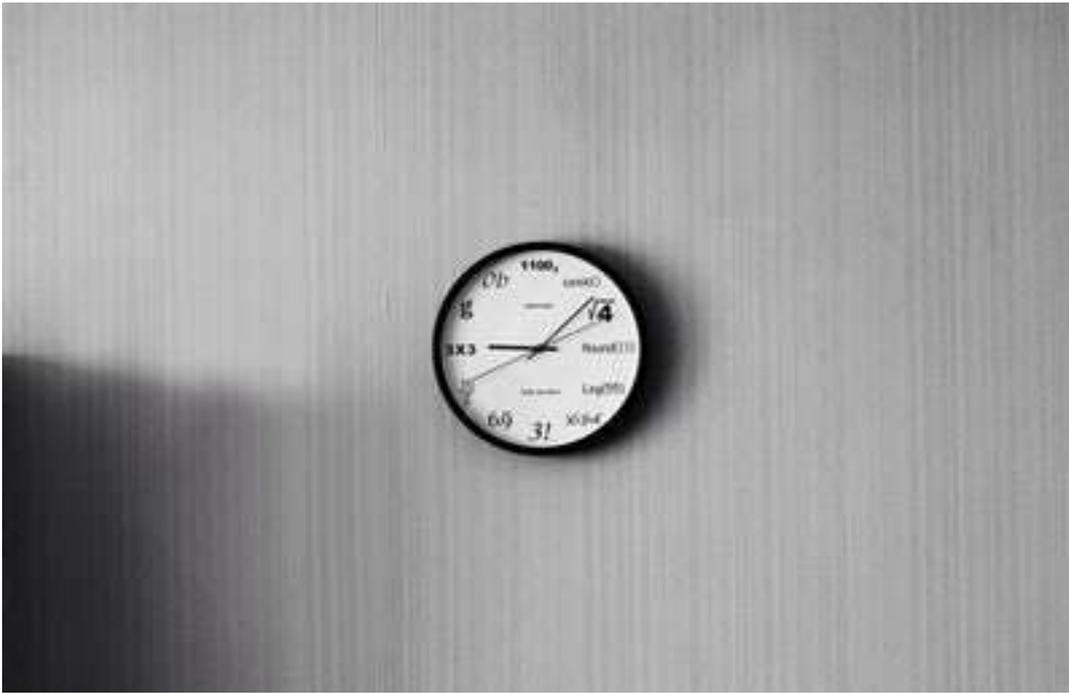

- 4- The fusion between the two produce a result that contains energy and trajectory of its own before its dispair.
- 5- The collision takes into account a temporal dimension, so each one of the parts can be understood as a complete universe.

Since the sphere is a perfect geometry, is used to represent various systems.

Each point of the infinite which are projected from the **Big-Bang** would describe the position of a star or point light.

The gravity of the star (which is E in its purest form, more than a planet) serves feed for its life by attracting new stuff from the outside.

There are no things more romantic than seeing a bird's nest atop a tree. This is love mother nature and acting aware that sustainability is a positive policy and follow the free operation of *natural laws*. Most know that such laws govern the world, such phenomena are reversible and irreversible, theory relativity, which stem from macro aspect of microsystems (such as quartz, graphite, diamond ...), principle of conservation of energy, perfect geometric structures such as the sphere (or other balanced), balances net mass and charge, balance of forces present in the solar system (reference systems), wave-particle nature ...

If everything is possible not funny. Negations or contradictions in everyday people Who has no memory need legs; going slowly absorbing new technologies.

Concentrate mean that you will not lose sight of other things that are beside the point (having regard to the mind awake); something you can relate to these changes is the mental order: what is not interesting is not worth it to stop care.

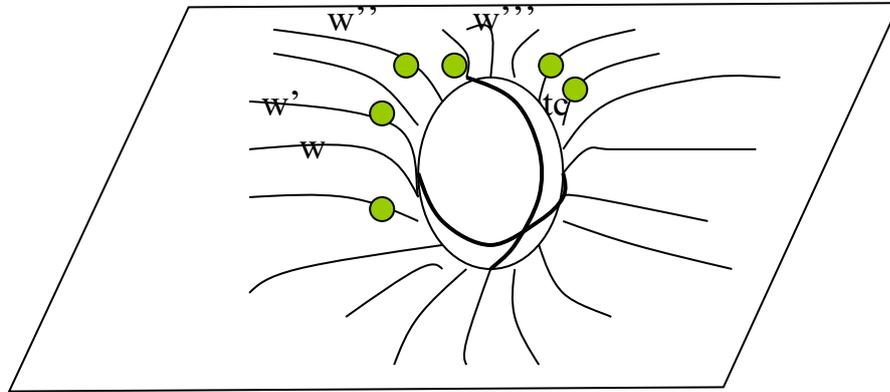

I'd rather keep my "state" and not wanting to feel the pleasure of anonymity or having reached a limit (usually because things are not finished, and the quantization is a test that never gets to predict the first particles, "there are always more inside").

We are an active part of the constant evolution of the Universe.

Let's figure 60 where to draw the gravity plan. Stars  $w$ ,  $w'$ ,  $w''$ ,  $w'''$ ... orbiting around the planet and tend to fall towards him if not act their centrifugal force.

The more intense the life is exploited, the more deviations and fluctuations will describe the graphic  $t_{\text{imaginary}} - t_{\text{real}}$ .

Fig. 60

Where the stars represent in the green, called  $w, w', w'', w'''$ ...

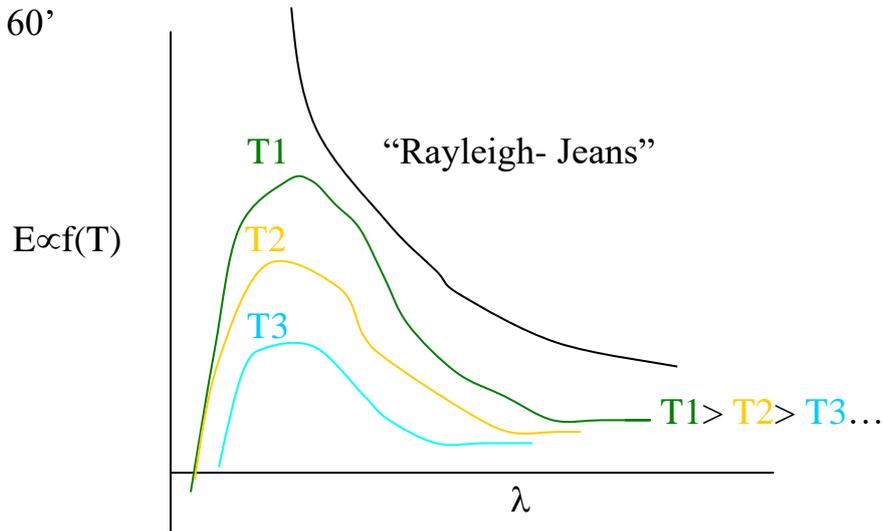

The more separated the galaxies, faster they appear from us (remember the concept space-time). In addition,  $\Delta U = 0$ , so  $q$  (heat) and  $W$  (work) solved with a minimum dissipation or maximum profit  $\uparrow\%$  efficiency).

The illusion is based on what you will be required to explain at every moment and not shirk responsibilities; moreover,  $\exists$  collapse between the obligation and the hobby when we mix it up.

Being the "king of the night" is discovered along the moving party, and the one who mess is not probably the most kind of leader. My only intention is to amuse me (as with boys as with girls) while I find sex is complementary. There are things only found in collective subconscious.

**Rayleigh-Jeans  $\neq$  Planck**, thanks to the graphic 60', see the ultraviolet catastrophe, that undoes the belief that the temperature grew linearly (the reader can make their own deductions and began to see how quantum theory was initiated).

Fig. 60'

Normally we deal with the speed and time, so we want to build buildings for example, and you better faster, resulting in poor quality and unreliability soon.

As the **bubbles** and their impact or interaction between them from their membranes, if the "earth membrane" would collision with another, could be catastrophic.
